Global Ranking of Gender Gap Index - 2022

The Global Gender Gap Report was first published in 2006 by the World Economic Forum. The Global Gender Gap Index is an index designed to measure gender equality.

The index is designed to "measure gender-based gaps in access to resources and opportunities in countries rather than the actual level of the available resources and opportunities in those countries." It is not necessarily true that highly developed countries should have higher scores.

The report examines four overall areas of inequality between men and women:

- Economic Participation and Opportunity – outcomes on salaries, participation levels and access to high-skilled employment
- Educational Attainment – outcomes on access to basic and higher-level education
- Political Empowerment – outcomes on representation in decision-making structures
- Health and Survival – outcomes on life expectancy and sex ratio.

The highest possible score is 1.0 and the lowest possible score is 0. Data for some countries are unavailable.

Country-wise Gender Gap Index Ranking and Score - 2022

India's Gender Gap Index Ranking 2022 is very low - 135 out of 146 countries.
